

The Right Glucosamine Solution

• Today's Opportunity in Joint Care •

When it comes to premium-quality, USP-grade vegetable glucosamine, GreenGrown® is the superior choice.

To learn more about GreenGrown® and how it can help you grow your glucosamine bottom line with premium-quality, non-GMO, USP-grade vegetable glucosamine, visit GreenGrownGlucosamine.com or call 415.459.4454.

We guarantee the superiority of our product and have the patents to prove it.

What Makes Our Product Unique?

Patent Protection and Quality Assurance

Patents

Manufacturing Patent:

ENI produces USP-glucosamine through a patented fermentation process from a glucose (vegetable source) base.

In addition to the US, this technology has also received patents or has patent applications pending in the following countries:

- | | | | |
|--------------------|------------------|------------------------|----------------------|
| • Australia | • China | • Great Britain | • Mexico |
| • Brazil | • France | • Japan | • Netherlands |
| • Canada | • Germany | • Korea | |

Identity Patent:

In 2011, ENI received a US patent, No. US 8076156 B1, for: Isotopic signature carbon tracing method to discern shellfish-based glucosamine from corn-based glucosamine.

The ISCT method is used to test the isotopic signature of glucosamine to determine whether the glucosamine was produced from corn or its derivatives (e.g., glucose) or from shellfish (e.g., non-vegetable matter).

This is an important step because under HPLC analysis the materials appear identical and substitutions can occur.

These two GreenGrown® patents assure our customers that they will get verified vegetable source material and will be protected from any potential patent infringement.

Meeting Consumer Demands

Growing Your Base of Loyal Vegan and Vegetarian Consumers

The vegetarian and vegan market has evolved from niche to mainstream, creating a significant and rapidly growing consumer group that is perhaps more focused than any other on health and wellness. At the same time, Americans across the demographics of the baby-boom generation are beginning to confront the facts of aging, such as the need to support healthy cartilage for supple, pain-free joints.

Incorporating GreenGrown® glucosamine into your supplements affords you a market advantage in connecting with these sizeable and important audiences.

Our GreenGrown® Products

GreenGrown® glucosamine is available in six different specifications, ideal for encapsulation or tableting.

- USP Glucosamine Sulfate (powder)
- USP Glucosamine Hydrochloride (powder)
- USP Glucosamine Sulfate (granular/chilsonated)
- USP Glucosamine Hydrochloride (granular/chilsonated)
- Glucosamine Sulfate (DTH, 95% granulation)
- Glucosamine Hydrochloride (DTH, 95% granulation)

*GreenGrown can also be supplied ready encapsulated from our **NSF-111** certified facility.*
